

Release Notes - Cloudbrink 13.2

New Features

	Feature	Description
1	Read-only Admin	This feature allows super administrators to grant read-only access to other administrators. Users with read-only access can view all settings and configurations within the admin portal but cannot make any changes.
2	User session termination by Admin	Enables administrators to proactively disconnect active user sessions from the admin portal for users running Brink App 13.2 or higher, offering an additional layer of control and security.
3	Chromebook Support	Brink App is now available on ChromeOS with all ZTNA and QOX features such as MFA, Device posture assessment, RBAC, traffic steering, SaaS and private apps access, etc.
4	Ubuntu 22.04 Brink App	Brink App is now available on Ubuntu 22.04 OS with all ZTNA and QOX features such as MFA, Device posture assessment, RBAC, traffic steering, SaaS and private apps access, etc.
5	Unique Users page changes	Enhanced the admin portal Unique Users page to show the "Complete User List".

Issues Resolved

	Item	Description
1	"Unknown" App	We have resolved an issue that was listing sessions as "Unknown" under the sessions tab in the admin portal.
2	Duplicate Entries	Fixed issue that listed duplicated device entries under the device tab in the admin portal.
3	OS Name	Resolved an issue that did not properly list the OS name in the device tab in the admin portal.

Support Information

We would love to hear from you! For any questions, concerns, or feedback regarding deploying the 13.2 release, please reach out at support@cloudbrink.com
