Release Notes - Cloudbrink 14.1

New Features

	Feature	Description
1	Internet Security BrinkApp Required	Internet Security enables customers to secure internet access to all websites online. Based on the website app category and the reputation score, Cloudbrink can allow or block or warn the admin about the access to the websites. Customers can support secure internet usage and comply with regulations with the Internet Security feature
2	External Browser based Authentication	Cloudbrink supports the option to use the default browser on the endpoint for the IDP authentication step. When this option is enabled, BrinkAgent will open the default browser tab to present the IDP login page and the user can proceed with the authentication steps.
3	Microsoft Entra Conditional Access	Cloudbrink can integrate with Microsoft Entra Conditional Access policies. Based on the endpoint Conditional Access status, Cloudbrink can determine the access status for the other SaaS apps and private apps Customers must use External Browser for Authentication configuration to support Entra Conditional Access integration
4	SAML IDP Certificate management	Customers can now download or renew the SAML IDP certificate directly from the Cloudbrink admin portal. The SAML IDP certificate downloaded from Cloudbrink portal must be used on the IDP side for encrypting/signing the SAML response
5	Mobile UX Revamp BrinkApp Required	Cloudbrink Mobile BrinkAgent UI is revamped to provide a more simpler and smooth navigating experience to the users
6	API Clients for config management	Customers can now create API clients from the admin portal which could then be used to manage the Cloudbrink configurations via API programmatically

Issues Resolved

	Item	Description
1	Admin Portal	Fixed an issue where local admins with long usernames were unable to log in to the admin portal..
2	Team/RDP Issue	Microsoft Teams and RDP sessions dropping intermittently
3	Android App	Android app failing to connect to Entra IDP.
4	Brink App	Resolved an issue where the Wintun user space tunnel was causing routing problems.
5	Admin Portal	Fixed an issue where the admin email ID configuration could not be changed in the admin portal.
