Release Notes - Cloudbrink 14.2

New Features

	Feature	Description
1	QOE Optimizations on 4G/5G	The Cloudbrink Brink App now dynamically adjusts the QoE profile for optimal application performance when endpoints are connected via 4G/5G hotspots.
2	QOE Analytics	Customers can view QoE analytics at both the device and individual application levels directly within the Cloudbrink Management Console (Admin Portal).
3	Active-Active Connectors on AWS	Cloudbrink supports horizontal scaling of Connector components on AWS, enabling customers to cluster up to 64 instances into a single logical Connector to meet higher scaling demands.
4	Tenant deletion improvements on MSP portal	MSP admins are now required to manually type "Delete" using the keyboard to enable the delete option as part of the tenant deletion workflow.
5	BrinkAgent on FreeBSD BrinkApp Required	Cloudbrink extends the Brink App support for FreeBSD platforms. BrinkAgent is currently supported on Windows, Mac, Ubuntu, iOS, Android and Chromebook
6	BrinkAgent UX improvements BrinkApp Required	The Brink App features an improved user experience with a modernized look and smoother interface.
7	Default Wildcard for Domains config behavior BrinkApp Required	By default, Cloudbrink appends a wildcard prefix to the Domains config parameter. From version 14.2 onward, this behavior can be toggled using a feature flag, allowing either the default prefix wildcard or customer-specified wildcard configuration.

Issues Resolved

	Item	Description
1	Admin Portal	Fixed an issue where local admins with long usernames were unable to log in to the admin portal..
2	Team/RDP Issue	Microsoft Teams and RDP sessions dropping intermittently
3	Android App	Android app failing to connect to Entra IDP.
4	Brink App	Resolved an issue where the Wintun user space tunnel was causing routing problems.
5	Admin Portal	Fixed an issue where the admin email ID configuration could not be changed in the admin portal.
